

# MODEL MAKING

## Dimensional measurement

I purchased a mannequin to better explore the fit of the health monitoring garment on the upper part of the body.

## Textile Test Production

At this stage, I'm exploring through cutting, sewing, and structural testing of different fabrics, which process and wrap is best suited to seamlessly integrate health monitoring functionality into a monitoring undershirt, while balancing comfort and wearability.

## Clothes customization and fit outcome

After finalising the size and fit I customised the dress by contacting the manufacturer based on the size requirements I provided to best showcase the shape of the dress
