# Red, hot, pillar box lips.

Using a lip colour with an orange undertone, can brighten the face and help define features, by bringing attention to the lips. A citrus burst on red lips, makes the red even more intense too, perfect for girls and women who love a sharp, and bright red. It can also help lift your mood, wake you up, and keep you energetic and alert throughout the day.

Maroon mixed in with your normal red lipstick, adds depth, and a deep hue to lips. It can make eyes look darker too, and when added to already applied make-up can create a full face effect, defining already applied cosmetics.

Full red lips, can give a blast of colour to the face, and make eyes look smaller, or more intense.

Adding a plum coloured lip gloss to maroon or red lipstick, brings warmth, and a girly glow to lips.
